## The vision

These challenges have been driving Dr. med. Gerny for more than 30 years. With his medical knowledge combined with his closeness to nature, he develops care products and treatments that penetrate deeper into the skin than conventional cosmetic products.

With his vision, Dr. Gerny already founded the System Med Beauty Swiss, which consistently focuses on immediately noticeable and visible skin results. A vision that has led to successful products together with his team. A brand that is celebrating success beyond Switzerland's borders and is popular with customers and experts alike.

*«We solve the challenge of the aging with the combination of the most modern technology, medical expertise and natural ingredients: Knowledge creates beauty!»*

## Phytomedical Cosmetics

We use the power of nature with the knowledge of modern medicine. The bringing together of dermatological expertise, renowned scientific knowledge and the power of nature, creates unique concentrations

of active ingredients. These combinations of active ingredients have a positive influence on the aging process and on keeping the skin healthy. All products are thoroughly tested for their compatibility and effectiveness.

## Natural ingredients

Nature has provided us with everything we need from the very beginning. Our knowledge of plants and herbs has improved and we learn daily what nature is capable of. Dr. med. Gerny learned this early and used the concentrated power of nature in cosmetics. We have succeeded in bringing this force of nature to the place of action in the form of high-quality active ingredients.

## Made in Switzerland

We attach great importance to quality, sustainability and effectiveness. Med Beauty Swiss has its headquarters in Switzerland. Here our products are developed and produced according to Swiss quality standards. Med Beauty Swiss abstains from animal testing in any form. Our products are distributed exclusively through trained specialist retailers.

Derma Flavon  
Natural hormonal  
nutrition  
for mature skin

## Anti-aging care & protection to strengthen the natural skin balance

Lifting Derma Flavon has been redesigned to meet the needs of mature skin and provide intensive protection against environmental stress.

### **Herbal active ingredients against the decreasing hormone production**

The product line counteracts the visible signs of skin aging. Its active plant complexes compensate for the decline in hormone production, the gradual breakdown of collagen, the reduction in skin thickness and the loss of moisture in the skin and effectively support the skin's own protection.

High-quality ingredients reduce the loss of moisture and build up a long-term depot. Collagen synthesis and cell renewal are stimulated and oestrogen deficiency is counteracted. The skin appears healthier, fresher and has more elasticity.

### **Strong anti-aging effect**

Lifting Derma Flavon activates the central skin functions, smoothes wrinkles and effectively counteracts the formation of new wrinkles.

Lifting Derma Flavon gives mature skin firmness, elasticity and a pleasant smooth skin feeling. This care gives the skin more density, volume and radiance.

## lifting Derma Flavon Phyto Balm

### Revitalization and protection

The balm with phytohormones provides daily protection, strengthening, moisturizing and cell regeneration for an elastic and firm skin. Vegetable oils and hyaluronic acid provide a lot of moisture and protect the skin against water loss. Inulin and Ectoin supports the natural skin barrier and the skin's moisture retention system. The balm alleviates the effects of premature skin aging and is suitable for the care of demanding, normal skin up to light combination skin.

### Application

The Lifting Balm can be used for day and/or night care.

## lifting Derma Flavon Phyto Cream

### Strengthening and moisture

The face cream reduces lines and wrinkles and provides the skin with intensive moisture. Phytohormones firm the skin, while plant oils and shea butter have an intensive nourishing and moisture-preserving effect. Inulin and ectoin protect the skin from environmental stress and increase the skin's own resistance to oxidative stress. The care is developed for demanding, mature and dry skin.

### Application

The face cream can be used as day care and/or night care according to your needs.

## lifting Derma Flavon Phyto Eye Cream

### Eye freshness with sustainability

For the moisture-deficient, sensitive eye area, the active ingredient combination of phytohormones, inulin, ectoin for strong regeneration and self-protection of the skin to wear. Vegetable oils and lipids support the moisture binding and provide a fresher and more radiant skin eye area.

### Application

Apply the eye cream to the cleansed eye area. Ideally, it is applied in the evening for an overnight intensive effect.

# lifting Derma Flavon Intensive care

DERMA FLAVON

## lifting Derma Flavon Phyto Serum

### **Firming and balancing the complexion**

The serum of phytohormones offers intensive regeneration. Ectoin and inulin reduce harmful effects on the skin caused by environmental influences. Beet-root extract, which provides natural vitamin C, prevents excessive pigmentation and Gatuline Paracress extract reduces facial wrinkles for firmer skin and a more even complexion.

### **Application**

Apply few drops on the cleansed face and décolleté, leave it onto skin to take effect and continue with normal day or evening care.

## lifting Derma Flavon Phyto Mask

### **Intensive hormonal nutrition and freshness kick**

The mask nourishes and refreshes tired and dehydrated skin. Phytohormones intensively support cell regeneration. The active ingredients inulin and ectoin strengthen the skin barrier and protect against environmental pollution. Vegetable oils and shea butter have a strong nourishing and moisture-retaining effect. The cooling effect of Frescolat makes the skin appear more alive, while irritated skin is soothed at the same time.

### **Application**

After cleansing the face, apply the mask thinly to the face/neck area and leave it onto skin to take effect for 15 minutes at least or overnight.

## Rejuvenated skin

As the skin's resilience and elasticity diminishes more and more over time and cell activity as well as moisture retention continuously decreases, care with active ingredients that counteract these processes is needed:

### **Soya isoflavones for natural hormone nutrition**

Phytohormones are plant hormones and regulate biochemical processes: soya isoflavones (Genistein) stimulate collagen synthesis and cell regeneration and counteract the negative effects of oestrogen deficiency in the skin. Soya isoflavones have been shown to improve skin density, firmness and elasticity. Isoflavones have a strong lifting effect.

### **Probiotics for building up a healthy skin flora**

Inulin as a natural, plant-based moisturizer on a sugar basis, which protects the skin from dehydration and gives a pleasantly smooth skin feel, supports

## Phytohormones, vegetable Botox & intensive cell protection

the skin's microbiological barrier and thus protects against environmental stress.

The latest scientific findings prove that probiotic skin care can strengthen the natural skin flora and bring it back into a healthy balance. The balanced skin flora then forms a natural protective shield for healthy skin.

### **Cell protection and intensive moisture**

The active ingredient Ectoin creates a natural protective shield, which increases the resistance of the cells. This increases resistance to heat, dryness, UV radiation, allergens and even particulate matter. Ectoin already has the ability to regenerate the damage caused and to stimulate collagen production. Cells are stabilised and thus protected against harmful environmental influences.

In addition, Ectoin keeps the moisture content of the skin at a stable level and forms on top long-term depots for skin in need of regeneration. Existing wrinkles are smoothed and the formation of new wrinkles is effectively prevented.

### **Intensive care**

In the serum, the active ingredient complex has been greatly expanded, making it an unbeatable anti-aging power serum:

- **Paracress Gatuline**

Spilanthol, the main active ingredient of paracress, has a muscle-relaxing effect on the skin, thus reducing the activity of muscle contractions, so that expression lines are efficiently reduced. The skin appears youthful and smoother, so that paracress is rightly described as an effective botox alternative.

- **Niacinamide (Vitamin B3)**

Niacinamide visibly improves the skin structure and balances hyperpigmentation. The formation of new collagen is promoted and water loss in the skin is counteracted. Skin damage caused by UV radiation is reduced by strengthening the skin's moisture barrier. The result is an even and healthy skin texture.

- **Beta Vulgaris Root Extract (Vitamin C)**

Beetroot extract is characterised by a high content of polysaccharides. In addition to its moisturising effect, it reduces skin irritation and neutralises free radicals. Vitamin C makes the skin look healthy and fresh.
